The BAJ is a lead acid battery for use together with the modular JUMBO™ patient lift system. It offers variable and reliable battery capacity together with easy mounting, charging and replacement.

The efficient battery offers easy attachment to the control box via integrated snap functionality, facilitating the handling in daily use.

Benefits of using BAJ:

- Easy mounting and replacement of battery - High battery capacity - Reliable performance
- Functional and elegant design - High battery capacity: 24 V DC, 1 x 29 Ah

This gives 40 lifts and lowering for the JUMBO system with fully charged battery under the following conditions:

- Thrust up to: 6000 N - The actuator does not reach the end position at any time - Stroke: $S = 200$ mm - By means of a snap system the battery pack can easily be mounted on the charger and/or the control box using LINAK mounting brackets - BAJ can be ordered with integrated DC plug - Protection class: Up to IPX5 (not defined for BAJ with integrated DC plug) - Colour: Bottom in dark grey (RAL 7016) and light grey (RAL 7035) and top in light grey (RAL 7035) -

Possibility for customised front cover - Accessory: Battery cover
